SMART MIRROR | CONNECTION SCHEMATIC

Arduino VENTUNO Q / PC-connected Arduino App Lab setup

1 DC BARREL POWER SUPPLY

Use an Arduino-recommended supply.
Match the board voltage, polarity
and power requirements.

DC POWER

2 USB WEBCAM

Aim toward the visitor.
USB camera frames
are captured on the board.

USB CABLE

DC BARREL INPUT

ARDUINO

VENTUNO Q

BOARD-SIDE PROCESSING

Camera capture
Person detection + outfit advice
Image search in the extended app
Local speech generation

USB-C DATA / DEVICE

USB-A HOST PORT

USB DATA CABLE
USB-C to laptop USB

3 LAPTOP / PC

Arduino App Lab + web browser
Open http://localhost:7000
Laptop speakers play the speech.

Optional display cable

OPTIONAL EXTERNAL MONITOR

Connect to the laptop display output.
The laptop browser shows the mirror UI.

CONNECT IN THIS ORDER

1 Power VENTUNO Q from its barrel input before connecting laptop USB.
2 Plug the webcam into a USB-A host port on VENTUNO Q.
3 Connect a USB data cable to the laptop, select the board in App Lab, and run.

Schematic connection diagram; connector positions are illustrative, not a physical port map.
No GPIO wiring or board-mounted USB speaker is required for this PC-connected version.
